

the copy relearns the three worst-retained classes and the never-seen classes

criterion = min(0.80, 0.95 × ceiling);
ceiling: the learner's best accuracy on that class during the stream;
a step = one write (write-only learners) or one gradient update (gradient-based baselines)

$S_{AUR} = (AUR_{seen} - AUR_{new}) / (1 - AUR_{new})$:
the normalised area between the recovery curves
(curves schematic; values in Supplementary Table 6)
